PROFESSIONAL SUMMARY

Business-minded technical problem solver with hands-on experience translating ambiguous, real-world problems into structured, data-backed solutions. Comfortable moving between technical execution and business reasoning – from building analytics pipelines for stakeholder decision-making to leading technical workshops and shipping full-stack applications under tight deadlines.

EDUCATION

BITS Pilani Dubai Campus Bachelor of Engineering, Computer Science CGPA: 9.3/10	2024 – 2028
The Millennium School, Dubai Grade 12 (Science) – 87%	2023

EXPERIENCE & LEADERSHIP

Suntech Business Solutions <i>Data Analytics Intern</i>	Jun 2026 – Jul 2026
- Built an operational analytics reporting pipeline for senior leadership, from PostgreSQL into Metabase dashboards. - Delivered a mentor-approved dashboard prototype using synthetic data to maintain progress while awaiting production data access. - Proposed an AWS-based architecture (S3, EventBridge, Lambda) with a supporting cost breakdown to scale the pipeline to production, informed by direct exposure to the company's backend infrastructure. - Authored a comprehensive internship report summarizing project scope, technical approach, and outcomes.	
Microsoft Tech Club (MTC) <i>Technical Executive</i>	Aug 2025 – Present
- Led and delivered a campus-wide AI workshop on recommendation systems, teaching machine learning concepts to students from diverse technical backgrounds. - Developed the official MTC website using React and Tailwind CSS after achieving framework-level proficiency within two weeks. - Designed workshop curriculum and technical content for the club's Vibe Coding initiative. - Developed game logic for a campus-wide typing competition.	

PROJECTS

Cabinet – Game Library Platform (Live Web App)	Vue.js, TypeScript, Supabase, PostgreSQL
- Built a full-stack social platform for game tracking with user authentication (Google / email), friend connections, and personalized game libraries (wishlist, backlog, cabinet). - Integrated the RAWG.io API to surface game metadata including Metacritic scores, genres, platforms, and cover art. - Designed an insights dashboard surfacing per-user analytics – top genres, average ratings, completion rates, and review activity – backed by PostgreSQL queries on Supabase. - Implemented a markdown-based review system with star ratings and a rich game detail modal.	
Are Intercity Routes RTA's Most Valuable Routes?	Independent Research
- Built a comparative cost model estimating per-trip profit margins across two RTA bus routes using publicly available data and clearly stated assumptions. - Modeled revenue, fuel, labor, and maintenance costs across multiple occupancy scenarios to isolate fare structure as the primary driver of margin differences. - Published full methodology, findings, and limitations on personal website.	
Retail Vision – AI Spatial Analytics	Python, YOLO, BoT-SORT, OpenCV
- Built a real-time retail analytics engine from CCTV footage. - Integrated YOLO detection and BoT-SORT tracking for identity-preserving customer analytics.	

- Implemented polygonal zone tracking and perspective correction to improve counting accuracy.

Hospital Management System

React, Node.js, Express, MySQL

- Built a full-stack hospital management platform supporting patient records, admissions, billing, and scheduling.
- Designed a normalized database schema with 11 tables, triggers, stored procedures, and views.
- Deployed frontend on Vercel and backend API on Railway.

Hands-Free Marking Tool

Python, OpenCV, MediaPipe

- Developed a touchless image annotation system using hand-tracking and gesture recognition.
- Enabled accurate image marking in sterile and contamination-sensitive environments.
- Optimized the vision pipeline for low-latency interaction.

Inventory Manager

Java, JavaFX, Maven

- Designed an extensible OOP architecture using inheritance, interfaces, and abstraction.
- Implemented a Factory Pattern for CSV-driven object creation.
- Added persistent storage through Java serialization.
- Connected JavaFX frontend with backend service layer using MVC architecture.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C, SQL

Frameworks & Tools: React, Tailwind CSS, Node.js, Express, JavaFX, OpenCV, MediaPipe, Metabase

Areas of Interest: Data Analytics, Business Strategy, Software Engineering, Machine Learning, Computer Vision

Professional Skills: Technical Leadership, Data-Driven Decision Making, Public Speaking, Curriculum Design, Rapid Upskilling
