PROFESSIONAL SUMMARY

Business-minded technical problem solver who turns ambiguous, real-world problems into structured, data-backed solutions, from executive analytics dashboards to unit-economics modelling and technical leadership.

EDUCATION

BITS Pilani Dubai Campus 2024 – 2028
B.E. Computer Science (Minor: Data Science) CGPA: **9.28/10**

The Millennium School, Dubai – Grade 12 (Science), 87% 2023

EXPERIENCE & LEADERSHIP

Suntech Business Solutions Jun 2026 – Jul 2026
Intern

- Built an executive compliance dashboard in Metabase on PostgreSQL covering volume, compliance, revenue, and client lifecycle across two tabs, using three multi-stage Sankey diagrams in place of separate pie and bar charts; validated on synthetic data pending production access.
- Evaluated two AWS deployment options and recommended a serverless ETL pipeline (Lambda, EventBridge, QuickSight) at $12–15/month versus $9/month for direct query.

Microsoft Tech Club (MTC) Aug 2025 – Present
Technical Manager Aug 2026 – Present

- Organised and conducted a campus workshop on steganography with Python.
- Scheduled to conduct a workshop on gesture-based computer vision using hand tracking (Hands-Free Marking Tool), November 2026.

Technical Executive Aug 2025 – Aug 2026

- Built a data-driven "About" page for the club website: editing a members and socials list automatically regenerates the grid of member cards.
- Co-ran a workshop on recommendation systems covering collaborative and content-based filtering.
- Helped set up tooling and curriculum for the "Vibe Coding" workshop.

BITS Pilani Dubai Campus Oct 2026 – Present
Teaching Assistant – Digital Design Lab & Electrical Sciences Lab

- Supervise three lab sections (∼20 students each), guiding students through experiments and verifying their results for accuracy.

PROJECTS

Are Intercity Routes RTA's Most Valuable Routes? Independent Research

- Built a per-trip profit model comparing two RTA bus routes (E306, X23) at 50%, 75%, and 100% occupancy using public data and stated assumptions; methodology published on my website.
- Found E306 earns 2.8–3.5× the profit of X23 at every occupancy level; E306 at half capacity still out-earns a full X23, pointing to fare structure over volume.

Cabinet – Game Library Platform (Live Web App) Vue.js, TypeScript, Supabase, PostgreSQL

- Built a full-stack social platform for game tracking with Google/email authentication, friend connections, and personalised libraries (wishlist, backlog, cabinet).
- Designed a PostgreSQL-backed insights dashboard (top genres, average ratings, completion rates) and integrated the RAWG.io API for game metadata and reviews.

Hands-Free Marking Tool Python, OpenCV, MediaPipe

- Built a touchless image annotation system using hand tracking and gesture recognition, enabling accurate marking in sterile and contamination-sensitive environments.
- Optimised the vision pipeline for low-latency, real-time interaction.

TECHNICAL SKILLS

Data & Analytics: SQL, PostgreSQL, Metabase, Python

Development: Java, JavaScript, TypeScript, C, React, Vue.js, Tailwind CSS, Node.js, Supabase, OpenCV, MediaPipe
